Regulation (EU) 2016/679

PRACTICE STATEMENT

FOR NON-QUALIFIED TRUST SERVICES

CONTENTS

1 INTRODUCTION

This "Practice Statement for Non-Qualified Trust Services" (the "Practice Statement", eIDAS-CPS-NQ) states the practices applied by "Evrotrust Technologies" AD ("Evrotrust") in the provision of trust services which are not qualified trust services within the meaning of Regulation (EU) No 910/2014. It currently applies to the issuance and management of non-qualified certificates for advanced electronic signature/seal under the "Policy for non-qualified certification services for advanced electronic signature/seal" (eIDAS-CP-NQC-AES).

This Practice Statement is designed as an umbrella document for all present and future non-qualified trust services of Evrotrust. Future services (including, when applicable standards are adopted, services related to electronic attestations of attributes) will be accommodated by adding service-specific annexes, without amendment of the core of this document.

1.1 DRAFTING TECHNIQUE – INCORPORATION BY REFERENCE

Evrotrust provides the non-qualified services using the organization, personnel, facilities, information security management system and technical infrastructure described in the current published version of the "Certification Practice Statement for Qualified Trust Services" of Evrotrust, document identifier eIDAS-CPS, available in the Evrotrust repository at https://evrotrust.com/tsp-documents (the "Main CPS"). Unless expressly modified or excluded by this Practice Statement, each new version of the Main CPS becomes applicable to the non-qualified services upon its publication. For the purposes of determining the practices applicable to a particular certificate lifecycle event, the applicable version of the Main CPS is the version published and in force at the time of that event. In the event of conflict, this Practice Statement and the applicable certificate policy prevail in respect of the non-qualified services.

To avoid duplication, this Practice Statement incorporates the Main CPS by reference, section by section, with one of the following dispositions:

- "Applies" – the referenced section of the Main CPS applies to the non-qualified services mutatis mutandis; references therein to "qualified certificate(s)" are read as "non-qualified certificate(s)" and references to the qualified operational certification authorities are read as references to "Evrotrust RSA Advanced Operational CA 2025";
- "Modified" – the referenced section applies subject to the modifications set out in section 3 of this Practice Statement;
- "Not applicable" – the referenced section concerns exclusively qualified trust services and

does not apply.

The mutatis mutandis reading rule does not extend to provisions whose applicability depends on qualified status, inclusion of a service in the Trusted List as a qualified service, use of the EU trust mark, use or assertion of a QSCD, inclusion of QcStatements, or conformity assessment under Article 20 of Regulation (EU) No 910/2014. Such provisions apply to the non-qualified services only where expressly restated in this Practice Statement or the applicable certificate policy.

2 APPLICABILITY OF THE MAIN CPS

Main CPS section	Disposition	Notes
1. Introduction, participants, hierarchy	Modified	**M1:** the Advanced CA hierarchy for the non-qualified services is defined in this Practice Statement; participants are defined in eIDAS-CP-NQC-AES.
2. Publication and repository	Modified	**M3:** non-qualified certificates published in a clearly designated repository segment; same availability infrastructure.
3. Identification and verification of identity	Modified	**M2:** identification per section 3 of eIDAS-CP-NQC-AES (standard / Baseline LoIP approaches); assessment and approval by the Information Security Management Commission (ISMC) under SP A.06 apply.
4.1–4.8 Certificate application, issuance, acceptance, key pair update	Applies	Mutatis mutandis; channels per subscriber agreement.
4.9 Suspension and revocation	Applies	Same grounds, procedures and time limits (revocation ≤ 24 h after valid request; REV-6.2.4-03A), incl. the exception procedures of the Main CPS where a revocation request cannot be confirmed within 24 h (REV-6.2.4-03BA).
4.10 Certificate status services (CRL/OCSP)	Modified	The common infrastructure and service levels apply to certificate profiles for which CRL or OCSP status services are provided. The service-specific status model is defined in the Annex.
5. Facility, management and operational controls (incl. trusted roles, records, archival, incident management, business continuity, termination)	Applies	Same premises, roles, event logging, archival and continuity arrangements; termination plan covers the non-qualified services; see **M7** for records of identification.
6. Technical security controls (CA key generation and	Applies	The cryptographic module and certification applicable to each Advanced CA, OCSP responder and centrally managed Subject-key component are specified in the

Main CPS section	Disposition	Notes
protection, cryptographic modules, activation data, computer and network security)		applicable approved component configuration; the common dual-control, trusted-role, system-security and lifecycle controls of Main CPS section 6 apply.
7. Certificate, CRL and OCSP profiles	Modified	**M4:** profiles per eIDAS-CP-NQC-AES section 7 and the Annex hereto; no QcStatements.
8. Compliance audit and other assessment	Modified	**M6:** no conformity assessment under Art. 20 eIDAS is required for the non-qualified services; internal audits and ISO 9001/27001/20000-1/22301 certifications cover them; voluntary notification to the CRC may be made.
9. Other business and legal matters (fees, confidentiality, personal data, liability, term and termination, dispute resolution, governing law)	Modified	**M8:** liability per Art. 13 eIDAS and the national Ordinance (insurance); GTC, Privacy Policy and Tariff apply; allocation of identification responsibility per subscriber agreements; **M10**: reliance limits and waiver grounds for non-qualified certificates.
10. Terms and abbreviations	Applies	Supplemented with the terms defined in eIDAS-CP-NQC-AES.

3 MODIFICATIONS

M1 (Hierarchy)

- The operational certification authority "Evrotrust RSA Advanced Operational CA 2025" is established within the Evrotrust hierarchy and is dedicated exclusively to non-qualified certificates. For the non-qualified services governed by this Practice Statement, this section and the applicable Annex constitute the authoritative description of the Advanced CA hierarchy. The certification path for end-user certificates governed by this Practice Statement is:
  - Root CA is "Evrotrust RSA Root CA";
  - Intermediate CA is "Evrotrust Intermediate CA";
  - Operational CA is "Evrotrust RSA Advanced Operational CA 2025";
  - End-user certificate.

  The OCSP responder certificate for this hierarchy is issued by "Evrotrust RSA Advanced Operational CA 2025" and is used solely for status information relating to the applicable non-qualified certificate profiles. The certification path and the CA certificates of this

hierarchy are published in the Evrotrust repository. Its key ceremonies, key protection and lifecycle follow section 6 of the Main CPS.

M2 (Identification)

- For every subscriber arrangement, an identity proofing process description is documented and approved by the ISMC under SP A.06 Organization of information security before the first issuance (ETSI EN 319 411-1, REG-6.3.1-00C). Each process covers, as a minimum, the collection and validation of identity attributes and evidence (ETSI TS 119 461, clauses 8.2 and 8.3) and defines the identity binding practices applied, which may be executed by Evrotrust (including through its identification services), by the subscriber as an attesting source, or jointly, with compensating controls as assessed. Except where identity verification at Baseline LoIP is agreed, no level of identity proofing under ETSI TS 119 461 is claimed. For a Baseline LoIP natural-person profile, the applicable use case under clause 9.2 of ETSI TS 119 461 is identified in the approved process description. For a Baseline LoIP legal-person profile, the applicable legal-person use case under clause 9.3 is identified. Where a natural person acts as representative of the legal person, clause 9.4 also applies, including Baseline LoIP identity proofing of the representative under an applicable use case of clause 9.2 and validation of the representative's role and authority.
- The "Client Identification Practices Questionnaire" forms part of the identity proofing flow; completed questionnaires and the decisions of the Commission are recorded and retained (minutes SF 06.1.1.1).
- Where identification is performed by a partner acting as an external Registration Authority, each issuance is supported by the standardized request/declaration for issuing of a non-qualified certificate based on identification performed by an external Registration Authority (current version 1.1 / 04.11.2025), signed with a qualified electronic signature by an authorized representative of the partner; the declarations are validated upon receipt and retained as registration records (see M7). Evrotrust remains responsible for the conformity of registration performed by external Registration Authorities (ETSI EN 319 411-1, OVR-5.4.1-01).

M3 (Repository)

- Non-qualified certificates and their status information are published in a repository segment designated "non-qualified". All public references to the services hereunder avoid any wording or trust mark suggesting qualified status.

M4 (Profiles)

- Certificate, CRL and OCSP profiles for the non-qualified services are set out in the annex to this Practice Statement. They contain no QcStatements and carry the policy identifiers of eIDAS-CP-NQC-AES section 1.3, indicating the applied identity verification approach. The Annex distinguishes the Standard and Baseline LoIP policy identifiers for both natural-person AES certificates and legal-person AESeal certificates.

M5 (Subject keys)

- Subject keys are managed as per section 5 of eIDAS-CP-NQC-AES. Where Evrotrust provides a remote signature or seal creation component and manages the corresponding Subject keys, controls aligned with the applicable provisions of ETSI TS 119 431-1 are applied in accordance with the approved service configuration to support the Subject's sole control or, for legal persons, control over the private key. This reference does not assert use of a remote QSCD or full conformity of every service component with ETSI TS 119 431-1.

M6 (Audit)

- The non-qualified services are within the scope of the internal audit programme and the certified management systems of Evrotrust (ISO 9001, ISO/IEC 27001, ISO 20000-1, ISO 22301). They are not subject to mandatory conformity assessment under Article 20 of Regulation (EU) No 910/2014 or to mandatory prior notification; Evrotrust may inform the CRC voluntarily.

M7 (Records)

- Registration and identification records for non-qualified certificates, including completed questionnaires, attestations and assessment decisions, are retained for the same period and under the same protections as registration records under the Main CPS, that is for ten years after the certificate based on them ceases to be valid, under applicable Bulgarian legislation, satisfying the minimum retention required by ETSI EN 319 411-1 (OVR-6.4.6-01).

M8 (Legal)

- Liability follows Article 13 of Regulation (EU) No 910/2014 and Bulgarian law, including the Ordinance on the liability and termination of the activity of providers of certification services; Evrotrust maintains the insurance or resources required thereunder for the services hereunder.

- Article 19a of Regulation (EU) No 910/2014 and the applicable implementing acts for non-qualified trust services, including Commission Implementing Regulation (EU) 2025/2160, together with the applicable NIS2-related cybersecurity, incident-notification, supply-chain-security and accessibility requirements, are implemented through the common governance, risk-management, security and accessibility controls described in the Main CPS.

M9 (Terms and conditions)

- The terms and conditions for the non-qualified services comprise the General Terms and Conditions, the applicable certificate policy and the subscriber agreement. They include at minimum the elements of ETSI EN 319 411-1, OVR-6.9.4-02: certificate acceptance, the record retention period of ten years under applicable Bulgarian legislation, satisfying the minimum retention required by OVR-6.4.6-01, the obligations of subscribers and subjects (OVR-6.3.5-01, OVR-6.3.5-02), the notice to relying parties (OVR-6.3.5-03) and policy variances (OVR-7.2-01).
- A PKI disclosure statement following Annex A of ETSI EN 319 411-1 is published for each non-qualified certificate service.
- The GTC already regulate the existing non-qualified certificate for advanced electronic signature under item 2.2 and the non-qualified service for management of remote signature/seal creation devices, including short-term certificates for one-time signing (item 2.4.2). Certificates issued under the policies governed by this Practice Statement carry the applicable policy identifiers specified in section 1.3 of eIDAS-CP-NQC-AES.
- The contractual provisions applicable to any profile for one-time signing using an electronic seal shall be adopted before that profile is offered in production. This Practice Statement and eIDAS-CP-NQC-AES supplement, and do not replace, those provisions.

M10 (Limitations of use and liability)

- For the non-qualified services, the mechanism of the Main CPS section "Limitations of liability" (transaction value limits entered in qualified certificates) is adapted as follows: for the non-qualified services, any applicable reliance or transaction-value limit is indicated in the PKI Disclosure Statement (eIDAS-PDS-NQC-AES) and/or the Subscriber agreement or a service-specific notice. It is not represented in the certificate through QcStatements. The waiver-of-liability grounds of the Main CPS apply, supplemented by the approach-specific grounds in section 8.3 of eIDAS-CP-NQC-AES (reliance beyond the disclosed

identity verification approach; identity data declared or attested by the subscriber).

M11 (Signature process layer)

- Where Evrotrust provides the applicable signature or seal creation, augmentation or validation component, the processes based on non-qualified certificates follow ETSI EN 319 102-1 and the applicable format standards, as set out in the section "Signature creation and validation" of eIDAS-CP-NQC-AES. The related service configurations are maintained as internal controlled documents.

4 FUTURE NON-QUALIFIED SERVICES

A new non-qualified trust service is added to the scope of this Practice Statement by: (a) adoption of a service-specific policy (or policy annex) defining the service, its identifiers and any service-specific lifecycle rules; and (b) an annex hereto with the applicable profiles and any additional modifications. Sections 5, 6, 8 and 9 of the Main CPS as incorporated herein apply to any such service unchanged unless the annex states otherwise.

For services related to electronic attestations of attributes, Evrotrust will align the relevant annex with the applicable ETSI specifications for attribute attestation services once adopted as European standards.
