

About Evrotrust

Evrotrust is a European provider of digital identity and qualified trust services, helping organizations replace paper-based processes with secure, fully digital customer journeys. The platform enables remote identity verification and legally binding electronic signing using only a smartphone, making onboarding, approvals, and contracting faster and easier for both businesses and end users.

Evrotrust is a qualified trust service provider under the EU eIDAS framework and operates an EU-notified eID scheme, enabling cross-border use across the European Union.

Partners can integrate Evrotrust quickly via API or a white-label SDK for web and mobile applications and offer streamlined digital onboarding with strong fraud prevention and high-assurance signing, including qualified electronic signatures (QES) when the highest legal certainty is required.

Evrotrust's portfolio includes electronic identification (eID), advanced and qualified eSignatures, eDelivery, eTimestamp, and validation tools. Trusted by banks, telecoms, and enterprises, Evrotrust helps organizations scale digital services with confidence, supporting compliance, reducing operational effort, and improving customer experience.
